Film Studio Uses RAIDIX to Protect Digital Content While Accelerating Post-Production Color Correction

THE CHALLENGE

Storing and accessing large files, such as medical images that can be a hundred gigabytes in size, can be challenging. One industry, however, Media and Entertainment, works with files that are truly gargantuan. When the resolution of digital content is 2K or 4K, over four times the resolution of standard high definition, a feature film can be up to two terabytes in size.

Working with files this large is formidable. A case in point is Sharp Image, a premium, full-service, animation and visual effects production studio located in Karachi, Pakistan. Since 1994, the award-winning firm has worked on feature films, animations, commercials, and other digital content for such clients as Colgate Palmolive, the Pepsi Cola Company, and Unilever. Poised to become a global player in its industry, the studio delivers world-class post-production services often on enormous 2K and 4K digital files.

Its artists must store terabyte-sized files and then stream them for post-production effects using applications like Blackmagic Design's DaVinci Resolve 12 for editing, advanced color grading, and finishing. When two artists worked on the same file, however, the files often suffered from data corruption, compromising production schedules and the integrity of files. Additionally, the size of the files taxed the NAS storage system. The 10Gb Ethernet links between the storage and workstations caused bottlenecks that further jeopardized deadlines.

To preserve its competitive edge, Sharp Image had to improve the performance and capabilities of its storage environment. The firm required faster links to support streaming and the means to safeguard files from corruption as multiple users worked on them. Yet it wanted to avoid the costs of deploying a hardware-based metadata controller, which would allow users to safely access the same blocks on a storage volume.

THE SOLUTION

Sharp Image turned to cost-efficient software-defined storage (SDS) for data protection, metadata controller functionality, and scalability to accommodate future growth. It also sought 16Gb Fibre Channel (FC) speeds to eliminate I/O latency, even for the largest media files. The studio evaluated one storage software solution, but found that it compromised FC performance. Additionally, it was not designed for media production, particularly for 2K and 4K content.

To achieve high-speed 16Gb/s throughput, Sharp Image deployed Celerity™ FC host bus adapters from ATTO Technology. The vendor then recommended RAIDIX for the studio's SDS solution.

The RAIDIX storage software provides function-rich control of storage clusters, including SAN and scale-out NAS architectures, and supports all major protocols such as Fibre Channel. The software prioritizes data streams and optimizes I/O performance by excluding the slowest drives in an array. Moreover, its patented algorithms detect and correct silent data corruption without impacting routine storage operations.

The RAIDIX software also offers metadata and RAID controller functionality, a key requirement for Sharp Image. Whereas RAID controllers generally support no more than 32 drives in an array, the RAIDIX architecture can support up to 64 for greater scalability.

With color rendering critical to its services, Sharp Image requested pre-sales assistance from RAIDIX technical support. RAIDIX technicians tested the software on the same hardware that the studio intended to use. This proof of concept verified the data speeds that Sharp Image demanded.

"We were impressed that an industry leader like ATTO Technology recommended RAIDIX, and understood its reasoning when we discovered the solution's rich capabilities," said Arifeen Yousufi, Deputy IT Manager for Sharp Image. "When RAIDIX confirmed that its software would perform quite effectively in our environment, we knew we had the answer to our problems."

The RAIDIX storage server

“

Our artists have I/O performance fast enough to stream the largest files without congestion, and they no longer worry about data corruption. Our storage environment is now optimized for performance, availability, and data protection.

— Arifeen Yousufi,
Deputy IT Manager

BUSINESS IMPACTS

Sharp Image installed the RAIDIX software on a high-density chassis from SuperMicro provisioned with 24 4Tb SATA drives for 96 terabytes of capacity. "Installing the solution was easy," said Yousufi. "RAIDIX support then helped us to tune the application for maximum read and write speeds."

Because the RAIDIX software provides RAID capabilities, Sharp Image economized by using commodity hardware rather than buying a pricey RAID array. Additionally, RAIDIX is more scalable than hardware-based RAID controllers, ensuring the firm can cost-effectively scale out its environment as needed.

"Our artists have I/O performance fast enough to stream the largest files without congestion, and they no longer worry about data corruption," said Yousufi. "Our storage environment is now optimized for performance, availability, and data protection."

RAIDIX offers Sharp Image additional value thanks to its web-based management interface. Users can easily monitor and manage storage systems, and view statistics to confirm performance and accelerate troubleshooting. They also configure settings to meet the demands of any job and can change read/write access to files.

For further protection against issues that might impede workflows, Sharp Image contracted for the RAIDIX premium support plan for comprehensive 24/7 support services, including system maintenance that can be performed during off-hours or on weekends to accommodate production schedules.

"RAIDIX is a complete storage solution for any company working with digital content," said Yousufi. "Our work is always safe and quickly available, ensuring we meet our clients' needs effectively and within their deadlines."

“

We were impressed that an industry leader like ATTO Technology recommended RAIDIX, and understood its reasoning when we discovered the solution's rich capabilities.

Deputy IT Manager

BENEFITS

- ✔ EFFICIENT, HIGH-SPEED STORAGE
- ✔ NO LATENCY TO IMPEDE WORKFLOWS
- ✔ ROBUST DATA PROTECTION
- ✔ COST-SAVINGS
- ✔ EXCEPTIONAL SCALABILITY
- ✔ AROUND THE CLOCK SERVICE AND CUSTOMER CARE

ABOUT RAIDIX

RAIDIX is a high performance storage system software development company. We tailor our software to fit industry-specific data storage needs for the market segments that have strict requirements towards storage reliability, scalability and high rate of data transfer.

The core strategic value is represented by patented erasure coding methods and innovative technologies that emerge from our research laboratory. Running on the commodity-off-the-shelf server hardware, RAIDIX creates a resilient storage with high throughput, high performance and low latency.

The global partner network consists of system integrators, storage vendors and IT solution providers, who build their storage products powered by RAIDIX focusing on professional applications. Media and Entertainment, Healthcare, Video Surveillance and High-Performance Computing (HPC) are the industries where huge amounts of unique data are generated on a daily basis and where RAIDIX finds most of its customers.

Founded in 2009, RAIDIX brings years of previous data storage experience to our clients. Together with a deep understanding of industry-specific processes, our vast technical expertise provides specific solutions through each of our software product families.

ABOUT ATTO

For over 28 years, ATTO Technology, Inc. has been a global leader in storage and network connectivity and infrastructure solutions for data-intensive computing environments. Located in Amherst, NY, USA, ATTO provides customers with a wide range of end-to-end solutions to better store, manage and deliver data. Our experience in engineering advanced technology into real-world product solutions provides customers with a unique competitive advantage.

With a focus toward high performance computing markets, ATTO manufactures Host Bus Adapters, RAID adapters, network adapters, storage controllers, Thunderbolt™-enabled devices, switches and software. ATTO solutions provide a high level of connectivity to interfaces including Fibre Channel, SAS, SATA, iSCSI, 10GbE, 40GbE, FCoE and Thunderbolt. ATTO distributes its products worldwide through Original Equipment Manufacturers (OEMs), Systems Integrators, Distributors and Value Added Resellers (VARs).

About AC&NC

Offering storage solutions for over 20 years, Advanced Computer & Network Corporation designs, manufactures and markets high-performance, competitively priced RAID/Hybrid Flash/All Flash Array data storage systems.

With a wide range of storage solutions for any computing platform and operating system, comprehensive free technical support, and rapid product delivery, AC&NC provides confident data protection to its clients ranging from workgroups to enterprises.

AC&NC's 3,500 customers globally include the world's largest manufacturers, financial services firms, Internet companies, telecommunications and healthcare providers, educational institutions, government agencies, and the military.

JetStor Powered by RAIDIX

AC&NC provides RAIDIX software integration and support services to OEM customers and end users by combining hardware, software and services into a unified solution to meet your business requirements.

Today's solutions for specific storage issues, including media & entertainment, HPC and healthcare.

Please email our pre-sales support department at sales@acnc.com to discuss pricing.

JetStor – Storage. Solutions. Support.
