- Wake-on-SAS allows you to remotely power on / off all cascaded JetStor JBOD expansion units for power saving

Leading Density with Uncompromisable Performance

The JetStor XS3326 (2.5" 2U 26-bay) is the industry's first high density hybrid flash SAN storage. It offers 8% more capacity than the common 2U 24-bay products on the market. This can further lower the cost per TB, minimize IT rack space, and generate greener footprint. Offers outstanding performance ideal for modern enterprise applications such virtualization, media editing, large scale surveillance, and backup.

High Availability and Enterprise Reliability

The JetStor series is a proven high availability SAN storage system with full redundancy in modular design. Its dual-active architecture and automatic failover / failback mechanism, coupled with cache-to-flash technology, enables the system to withstand critical situations.

Flexible I/O Modules and Scale-up Capacity as Needed

Each controller has two host card slots that can be configured as iSCSI, Fibre Channel, or a mix of both besides built-in 4-port 10 GbE iSCSI (SFP+). As a result, the series offers great flexibility with built-in 8-port 10 GbE iSCSI and up to 24 host ports in a dual-controller system. In addition, the XS3326 provides massive scale-up capabilities by connecting JetStor JBOD or 3rd-party expansion units with up to 546 disk drives or 16.7 PB raw capacity for future data growth.

Proven Simplicity - "Set and Forget" Data Services

XEVO, its storage management system with intuitive GUI designs, helps to save time in storage deployment considerably. XEVO also delivers enterprise storage features including complete RAID level protection, RAID EE with fast rebuild, thin provisioning, SSD cache, auto-tiering, and more. With the help of an intuitive dashboard and reporting system, managers can analyze business usage and monitor storage status in real time.
Advanced Data Protection to Safeguard Assets

To protect against data loss and downtime events, XEVO provides complete array-based backup functions including local backup and remote replication. Based on snapshot technology, a solid safety net for disaster recovery can be built to meet the required RPO and RTO.

Secure Data and Secure Management

Supporting SED (Self-Encrypting Drives) will keep your sensitive data safe even if the drives are lost, stolen, or misplaced. Additionally, RBAC (Role-Based Access Control) helps to prevent unauthorized access to your data. All management communication is secured over https.
